Interdependent quantum graph mixture on observed LANL events
(a) Real-event expert mixture
Mean reciprocal rank
Temporal expert
Graph expert
Classical MoE
Selected quantum router
Complete
Random loss
Hub loss
Auth only
DNS only
(b) Component-necessity effects
vs temporal
vs graph
vs classical MoE
Paired ΔMRR
(c) Random-loss rank spectrum
Survival probability P(R > r)
True destination rank
(d) Condition-adaptive arbitration
Router statistic
admission α
top-10 expert overlap
